

**Amendments to the Specification**

Please replace the paragraph at page 7, beginning at line 26, under the heading SUMMARY OF THE INVENTION with the following:

According to the invention, there is provided a hybrid maize plant, designated as 36N70, produced by crossing two Pioneer Hi-Bred International, Inc. proprietary inbred maize lines GE570937 and GE501400. These lines, deposited with the American Type Culture Collection, (ATCC), Manassas, Virginia 20110, have accession number [ ] PTA-5513 for GE570937 and accession number [ ] PTA-1282 for GE501400. This invention thus relates to the hybrid seed 36N70, the hybrid plant produced from the seed, and variants, mutants and trivial modifications of hybrid 36N70. This invention also relates to methods for producing a maize plant containing in its genetic material one or more transgenes and to the transgenic maize plants produced by that method. This invention further relates to methods for producing maize lines derived from hybrid maize line 36N70 and to the maize lines derived by the use of those methods. This hybrid maize plant is characterized by a unique combination of yield for its maturity, area of adaptation, strong agronomic package, (strong stalks and roots, above average stay green, and Anthracnose stalk rot tolerance) and stability across yield levels.

Please replace the paragraph at page 50, beginning at line 2, under the heading DEPOSITS with the following:
